

# PSYCH 260/BBH 203

Learning & Memory, Part II

Rick Gilmore

2022-04-25 10:14:20

# Announcements

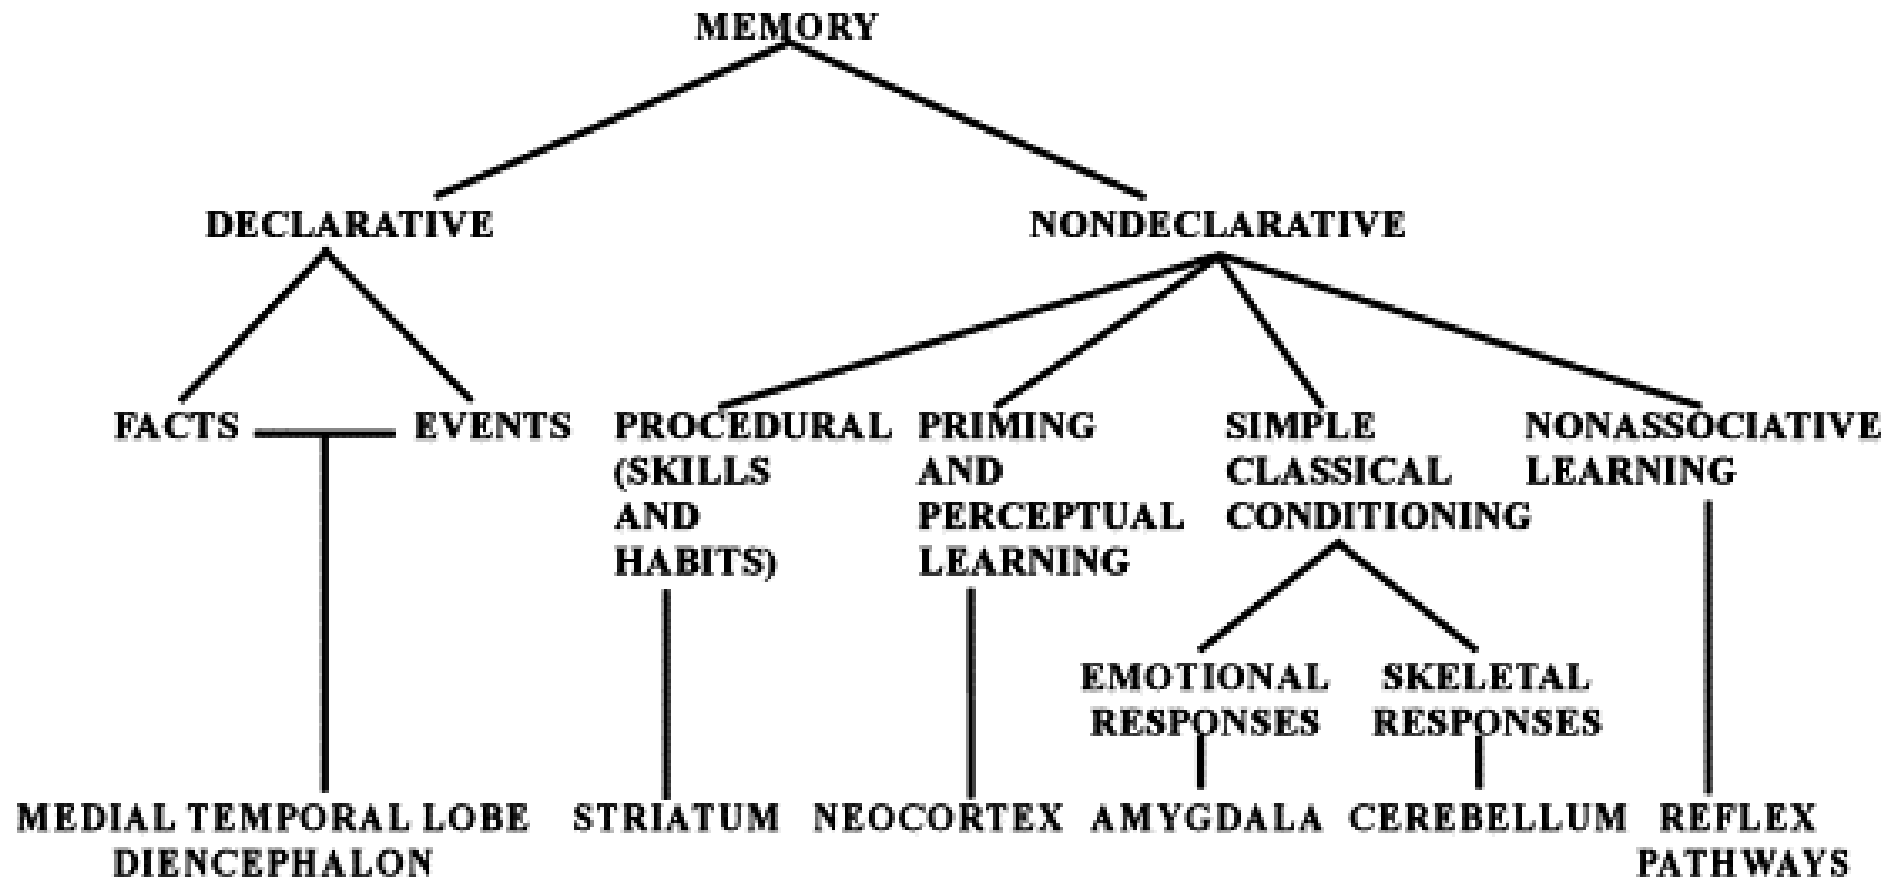

- Exam 4, Tuesday, May 3, 12:00 PM (noon) - 10:00 PM

# Today's topics

- Wrap-up on [learning and memory](#)
- Disorders of memory

Review from last time

# Memory systems in the brain

(Squire, 2004)

# Review from last time

- Learning and memory involve changes in neural firing, circuitry
- Hebbian learning a type of associative learning
- NMDA receptor as coincidence detector
  - Molecular basis of one form of long-term potentiation (LTP)
- Different types of information stored in different brain systems
- Wrap-up on [learning and memory](#)

# Disorders of memory

# Patient HM (Henry G. Molaison)

- Intractable/untreatable epilepsy
- Bilateral resection of medial temporal lobe (1953)
- Epilepsy now treatable
- But, memory impaired
- Lived until 2008

# HM's surgery

<https://www.pbs.org/wgbh/nova/media/images/corkin-hm-memory-08.width-800.jpg>

# Brenda Milner tells the story

# Amnesia

- Acquired loss of memory
- ≠ normal forgetting
- Note: computers don't forget

# HM's amnesia

- Retrograde amnesia
  - Can't remember 10 yrs before operation
  - Distant past better than more recent
- Severe, global anterograde amnesia
  - Impaired learning of new facts, events, people
- But, skills (mirror learning) intact

# Types of amnesia

- Retrograde ('backwards' in time)
  - Damage to information acquired pre-injury
  - Temporally graded
- Anterograde ('forward' in time)
  - Damage to information acquired/experienced post-injury

# What it's like

*Every day is alone in itself, whatever enjoyment I've had, and whatever sorrow I've had...Right now, I'm wondering, have I done or said anything amiss? You see at this moment, everything looks clear to me, but what happened just before? That's what worries me. It's like waking from a dream. I just don't remember.*

# What it's like

# Other causes of amnesia

- Disease
  - Alzheimer's, herpes virus
- Korsakoff's syndrome
  - Result of severe alcoholism
  - Impairs medial thalamus & mammillary bodies

# Patient NA

- Fencing accident
- Damage to medial thalamus
- Anterograde + graded retrograde amnesia
- Are thalamus & medial temporal region connected?

# Patient NA

# Spared skills in amnesia

- Skill-learning
- Mirror-reading, writing
- Short-term memory
- “Cognitive” skills
- Priming

# What does amnesia tell us?

- Long-term memory for facts, events, people
- ≠ Short-term memory
- ≠ Long-term memory for “skills”
- Separate memory systems in the brain?

# Alzheimer's Disease (AD)

- Chronic, neurodegenerative disease affecting ~5 M Americans
- Cognitive dysfunction (memory loss, language difficulties, planning, coordination)
- Psychiatric symptoms and behavioral disturbances
- Difficulties with daily living
- [\(Burns & Iliffe, 2009\)](#)

# Progression

**Mild cognitive impairment:** Complaints of memory loss, intact activities of daily living, no evidence of Alzheimer's disease

**Mild Alzheimer's disease:** Forgetfulness, short term memory loss, repetitive questions, hobbies, interests lost, impaired activities of daily living

**Moderate Alzheimer's disease:** Progression of cognitive deficits, dysexecutive syndrome, further impaired activities of daily living, transitions in care, emergence of behavioural and psychological symptoms of dementia

**Severe Alzheimer's disease:** Agitation, altered sleep patterns, assistance required in dressing, feeding, bathing, established behavioural and psychological symptoms of dementia

**Very severe Alzheimer's disease:** Bedbound, no speech, incontinent, basic psychomotor skills lost

(Burns & Iliffe, 2009)

- Post-mortem exams show  $\beta$  amyloid plaques and neurofibrillary tangles in hippocampus + other brain areas

# AD Treatments

- Acetylcholinesterase (AChE) inhibitors (e.g. Aricept)
  - ACh a neuromodulator in the brain
- NMDA-R partial antagonists (e.g., Memantine)
- Drugs that address amyloid  $\beta$  don't work especially well
- AD the result of disordered immune response?

# Hippocampus

<https://upload.wikimedia.org/wikipedia/commons/5/5b/Hip>

# Hippocampus & medial temporal lobe areas

- Dense in NMDA receptors
- Formation, storage, consolidation of long-term episodic or declarative memories
- Stores info for later transfer to cortex

# Hippocampus in non-human animals

- Similar architecture to humans
  - More known about mechanisms for *spatial* than *non-spatial* memory
- Place cells
- Grid cells
- Head-direction cells

(Dickerson & Eichenbaum, 2010)

# Cortical areas activated or deactivated during memory encoding

Cortical areas deactivated in non-memory cognitive tasks but activated during memory retrieval

# Memory systems in the brain

(Squire, 2004)
